Enterprise Product Designer with 4.7+ years of experience designing complex industrial and enterprise software solutions across oil & gas and automotive domains. Skilled in UX strategy, workflow optimization, data-heavy dashboards, design systems, and frontend-aligned implementation. Experienced in collaborating with global cross-functional teams to simplify operational workflows and deliver scalable, user-centered digital products using AI-assisted design workflows and modern UX practices.

Work Experience

SLB - Schlumberger (Sensia) 24th Feb 2024 -Present

Frontend & Development Experience

- Developed responsive user interfaces using HTML, CSS, JavaScript, Bootstrap, AngularJS, and React.js, ensuring seamless alignment between design concepts and frontend implementation
- Leveraged frontend development expertise to bridge the gap between design and engineering teams, improving implementation feasibility, design consistency, and overall product development efficiency.

UX & Product Design Experience

- Designing enterprise-grade industrial software solutions for oil & gas operational workflows, monitoring systems, and data-driven applications
- Collaborating with global cross-functional teams including product owners, developers, and stakeholders to deliver scalable and user-centered product experiences.
- Conducting user research activities including workflow analysis, stakeholder discussions, usability evaluations, competitive analysis, and user behavior understanding to identify pain points and improve operational efficiency.
- Simplifying complex operational workflows through UX strategy, interaction design, usability improvements, and workflow optimization techniques.
- Creating scalable design systems, reusable UI components, and interaction patterns to improve consistency and long-term maintainability across enterprise applications.
- Developing high-fidelity interactive prototypes, wireframes, user flows, and information architecture for complex enterprise platforms.
- Leveraging AI-assisted design workflows for UX research synthesis, ideation, rapid prototyping, content generation, and workflow optimization to accelerate product design processes and improve efficiency.

Projects

AVALON - Enterprise Oil & Gas Platform - UX Designer

- Redesigned a legacy enterprise application into a modern, modular, and scalable platform, improving usability, visual consistency, and long-term maintainability across multiple application modules.
- Revamped complex workflow-driven user journeys, reducing friction and optimizing task efficiency, resulting in significant improvements in overall application usability and operational experience.
- Introduced a scalable design system to standardize UI components, interaction patterns, and design consistency across enterprise modules, accelerating development workflows and improving maintainability.

Avocet Mobile – Oil & Gas Operational Platform - UX Designer

- Led the UX redesign of an enterprise mobile application for oilfield operations, transforming basic data-entry workflows into guided, decision-support experiences for field operators.
- Designed scalable workflows for managing multi-well operations, improving data visibility, reducing navigation complexity, and enhancing operational efficiency in offline and field environments.
- Delivered user-centered solutions through workflow analysis, information architecture improvements, usability evaluations, and iterative interaction design across complex operational systems.
- Collaborated with global cross-functional teams to simplify data-heavy interactions and improve usability for critical field operations and production monitoring workflows.

IASYS Technology Solutions pvt ltd 7th June 2021 - 24th Feb 2024

Combine BRIX application - UI UX Designer / Frontend Developer

- Redesigned legacy enterprise applications into modern, modular, and scalable platforms, improving usability, workflow efficiency, visual consistency, and long-term maintainability across multiple application modules.
- Revamped complex workflow-driven user journeys through user research, usability evaluations, interaction design, and information architecture improvements to enhance overall product experience and operational efficiency.
- Introduced scalable design systems and reusable UI patterns to standardize components, improve cross-product consistency, and accelerate development workflows across enterprise applications.

Skills

Frontend

- HTML • CSS • JavaScript • AngularJS • Frontend Implementation • Bootstrap

Software & Tools

- Figma • Adobe XD • Notion • ChatGPT • Claude • Cursor

Product Design & UX

- User Research • Wireframing & Prototyping • Usability Testing • Information Architecture
- Product Design • Enterprise UX • UX Strategy • Interaction Design • Workflow Optimization
- Responsive Design (Mobile & Desktop) • User-Centered Design • Accessibility & Usability
- HCI • Design Thinking • Cross-Functional Collaboration • Human Factors Engineering

Certifications

1. Google UX Certification
2. IBM Enterprise Design Thinking
3. Advance Figma Design
4. Advance Bootstrap 5
5. Human Computer Interaction

Education

Tatyasaheb Kore Institute Of Engineering And Technology, Warananagar.
